

Stallion®

480g/L Prothioconazole

PRODUCT OVERVIEW

Conquest Stallion 480, containing 480 g/L prothioconazole in the form of a suspension concentrate (SC) is a broad-spectrum systemic fungicide.

Fungal diseases pose a significant challenge for cereal crops, resulting in estimated yield reductions of 15-20%. In severe instances, these losses can escalate to as much as 50%. This is why prothioconazole known under the Conquest brands Stallion and Mantaray (prothioconazole 210g/L + tebuconazole 210g/L) is a key asset for the protection of cereal crops from a variety of problematic foliar diseases.

Stallion 480 helps preserve cereal yield potential by protecting the crop from major foliar diseases such as Powdery mildew, Spot Form Net Blotch (SFNB), Net Form Net Blotch (NFNB) and Septoria. Due to its unique chemistry (triazolinthiones), Stallion 480, as a rotational tool and tank mix partner, plays a significant role in the fungicide resistance management program in cereal crops.

KEY FEATURES

- ✓ Approved for aerial application in cereals.
- ✓ Tailored disease management, with flexible tank mixing
- ✓ Targets hard problematic foliar diseases
- ✓ Efficient storage and handling due to high active content
- ✓ Long-lasting broad spectrum control
- ✓ Flexible application timing
- ✓ Physically compatible with a range of pesticides
- ✓ Proven crop safety track record

Powdery mildew in wheat

Net blotch in barley

FUNGICIDE

STALLION IN CEREAL CROPS AT A GLANCE

Target crops	Wheat, Barley, Oats, Triticale,
Diseases	SFNB, NFNB, Powdery mildew, Leaf scald, Rust, Septoria, Fusarium, Yellow leaf spot
Application rate	66 - 132 mL/ha
Application regime	Ground application: Apply product using a spray volume of 70 – 100 L/ha and a MEDIUM spray quality.
Aerial application	Use a minimum spray volume of 20 L/ha and a MEDIUM spray quality.
Spray interval	Repeat applications at 14 – 21 day intervals if conditions favour disease development.
Spray regime	Apply no more than two Stallion fungicide sprays per season
Withholding period	4 weeks
Rainfastness*	Stallion is almost completely rainfast within 3-6 hours
Adjuvant choices*	Conquest Wetter 1000, Conquest Glisarin®, Conquest In2®/In2® Pro *

*To find out more, please see the label or speak to your Conquest representative.
